Important: please adhere to instructions to authors, to be found on the last pages of each volume.

After acceptance of the paper for publication, further correspondence should be sent to the publishers (Drs. D. de Heer, Editorial Department, North-Holland Physics, P.O. Box 103, 1000 AC Amsterdam, The Netherlands; FAX 31-20-5862726; telex 10704 espom nl; electronic mail X400: C = NL; A = 400NET; P = SURF; O = Elsevier; S = NHPDESKED or RFC822: NHPDESKED@ELSEVIER.NL).

Chemical Physics is published semi-monthly. For 1991, 9 volumes, volumes 148-157 (27 issues altogether), have been announced. The subscription price for these volumes is Dfl. 3240.00 (US\$ 1928.45). Postage and handling amount to Dfl. 270.00 (US\$ 160.70). Therefore the total price is Dfl. 3510.00 (US\$ 2089.15). The Dutch guilder price is definitive, dollar prices are for guidance only. Claims for issues not received should be made within three months of publication. If not, they cannot be honoured free of charge.

Subscriptions should be sent to the publisher: ELSEVIER SCIENCE PUBLISHERS B.V., Journals Department, P.O. Box 211, 1000 AE Amsterdam, The Netherlands, or to any subscription agent or bookseller.

Special regulations for authors. Upon acceptance of an article by the journal, the author(s) will be asked to transfer copyright of the article to the publisher. This transfer will ensure the widest possible dissemination of information.

Submission to this journal of a paper entails the author's irrevocable and exclusive authorization of the publisher to collect any sums or considerations for copying or reproduction payable by third parties (as mentioned in article 17 paragraph 2 of the Dutch Copyright Act of 1912 and in the Royal Decree of June 20, 1974 (S.351) pursuant to article 16b of the Dutch Copyright Act of 1912) and/or to act in or out of Court in connection therewith.

Special regulations for readers in the USA. This journal has been registered with the Copyright Clearance Center, Inc. Consent is given for copying of articles for personal or internal use, or for the personal use of specific clients. This consent is given on the condition that the copier pays through the Center the per-copy fee stated in the code on the first page of each article for copying beyond that permitted by Sections 107 and 108 of the US Copyright Law. The appropriate fee should be forwarded with a copy of the first page of the article to the Copyright Clearance Center, Inc., 27 Congress Street, Salem, MA 01970, USA. If no code appears in an article, the author has not given broad consent to copy and permission to copy must be obtained directly from the author. All articles published prior to 1981 may be copied for a per-copy fee of US\$ 2.25, also payable through the Center. This consent does not extend to other kinds of copying, such as for general distribution, resale, advertising and promotion purposes, or for creating new collective works. Special written permission must be obtained from the publisher for such copying.

No responsibility is assumed by the Publisher for any injury and/or damage to persons or property as a matter of products liability, negligence or otherwise, or from any use or operation of any methods, products, instructions or ideas contained in the material herein. Although all advertising material is expected to conform to ethical standards, inclusion in this publication does not constitute a guarantee or endorsement of the quality or value of such product or of the claims made of it by its manufacturer.

Films*

Editor-in-Chief: J. N. Zemel

*Department of Electrical Engineering, University of Pennsylvania
Philadelphia, PA, U.S.A.*

Aims and Scope

The Journal is an archival publication dedicated to all aspects of condensed matter film science and technology. Both fundamental and applied studies are of interest to our readers.

The Journal provides the following sections:

- A— Electronics and Optics: galvanomagnetic phenomena, superconductivity, electro- and non-linear optics, electromagnetic interactions. Fundamental studies and those related to electronic and optical devices.
- B— Metallurgical and Protective Layers: preparation, erosion and wear resistance, diffusion and diffusion barriers, and mechanical properties.
- C— Preparation and Characterization: growth, nucleation and fabrication of condensed matter films, X-ray and electron diffraction, and electromagnetic, electron beam, ionic and electron microscope characterization.
- D— Langmuir-Blodgett and Related Films: preparation methodologies, chemical, biochemical and biological properties, physical and optical properties, other characteristics and device applications.
- E— Condensed Matter Film Behaviour: multidisciplinary topics not covered above or those that cannot be easily defined as falling into one category.

Aims and Scope

Papers and Reviews may be concerned with either quantitative or qualitative aspects of photochemistry. The scope includes the physical chemistry of excited atoms or molecules, studies of electronic energy transfer, quantum yield determinations and kinetic measurements made under stationary or non-stationary conditions, measurements of rate constants for primary or secondary photochemical processes, studies of absorption or emission spectroscopy applied to photochemistry, mechanistic investigations of photochemical reactions based

on product analysis or energy transfer studies, identification of the products of photochemical reactions, and studies related to the photochemical conversion and storage of solar energy and to atmospheric photochemistry. Papers relating to Applied Photochemistry are also published. This field includes studies of photoinitiation of polymerization, photocross-linking, photodegradation or photostabilization of polymers, photohalogenation, chemical aspects of photography and the design of photoreactors.

JOURNAL OF

ELECTROANALYTICAL CHEMISTRY

AND INTERFACIAL ELECTROCHEMISTRY

Published semi-monthly

An International Journal Devoted to All Aspects of Electrode Kinetics, Interfacial Structure, Properties of Electrolytes, Colloid and Biological Electrochemistry

EDITOR:

R. Parsons, F.R.S.
Southampton, U.K.

U.S. REGIONAL EDITOR:

W. R. Fawcett
Davis, CA, U.S.A.

Aims and Scope

The *Journal of Electroanalytical Chemistry and Interfacial Electrochemistry* is the foremost international journal devoted to the interdisciplinary subject of electrochemistry in all its aspects, theoretical as well as applied. Besides original research papers, the journal publishes short communications and reviews of recent developments.

Extra rapid publication is available in the form of Preliminary Notes, which normally appear within two months of acceptance.

Subscribers to the *Journal of Electroanalytical Chemistry* receive *Bioelectrochemistry* and *Bioenergetics* automatically as part of their subscription.

Laser Handbook

Volume 6:

Free Electron Lasers

*edited by W.B. Colson,
C. Pellegrini and A. Renieri*

1990 xviii + 508 pages
US \$161.50/Dfl.315.00
ISBN 0-444-86953-0

The interplay between electric magnetic and the photon field have an intrinsic beauty and are deeply rooted in the fundamental understanding of nature. In this volume, edited by three major initiators in the field and containing contributions from experts belonging to the most advanced groups working on the subject, a first, comprehensive account of the Free Electron Laser is given. Chapters include both complete classical and quantum mechanical descriptions. Various types of experiments with intrinsic strong points and weaknesses are described while attention is also given to state-of-the-art experiments.

This book is not intended as a catalogue of on-going experiments, nor is it an attempt to prove that Free Electron Lasers are possible. It is the first large scale reference source from which all further publications on

Free Electron Lasers will be based. It will therefore be indispensable for theorists and experimentalists interested in the fundamental aspects of these types of lasers.

Scattering in Volumes and Surfaces

*edited by
M. Nieto-Vesperinas and
J.C. Dainty*

(North-Holland Delta Series)

1990 viii + 324 pages
US \$89.75/Dfl.175.00
ISBN 0-444-88529-3

Inspired by a workshop on Volume and Surface Scattering, held in Madrid, Spain in September 1988, this volume contains contributions from leading experts in the field. It presents an exact picture of the subject and aims to stimulate interest by giving an account of the considerable progress made in this field over the past years.

Dealing with the subject of scattering and propagation from random media and rough surfaces, this book introduces new multiple scattering techniques, new experimental data, photon localization and enhanced backscattering.

Progress in Optics

Volume XXVIII

edited by E. Wolf

1990 xix + 438 pages
US \$120.50/Dfl.235.00
ISBN 0-444-88439-4

Progress in Optics is a well-established series of volumes of review articles dealing with theoretical and applied optics and related subjects. Widely acclaimed by numerous reviewers as representing an authoritative and up-to-date source of information in all branches of optics, the series continues to fulfill a genuine need within the scientific community.

Contents: Preface. Digital holography-computer-generated holograms (*O. Bryngdahl and F. Wyrowski*). Quantum mechanical limit in optical precision measurement and communication (*Y. Yamamoto, S. Machida, S. Saito, N. Imoto, T. Yanagawa, M. Kitagawa and G. Bjork*). The quantum coherence properties of stimulated Raman scattering (*M.G. Raymer and I.A. Walmsley*). Advanced evaluation techniques in interferometry (*J. Schwider*). Quantum jumps (*R.J. Cook*). Author index. Subject index. Cumulative index volumes I-XXVIII.
